Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claims 1-14 are presented for examination.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 7-14 are directed to non-statutory subject matter. Claims 7-13 are directed to an internet document service, wherein document is being edited in an Internet client browser window. The claims are software-related. They are not tangibly embodied in a manner as to be executable.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 7 recites the limitation "to the client in a message". There is insufficient antecedent basis for this limitation (the client) in the claim.

Claim Objections

Claim 14 is objected to because of the following informalities: the claim recites "common interest in such". This recitation is vague and indefinite. Appropriate correction is required.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2151

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 7-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hanson et al. ("Hanson") US patent Number 5,956,736.

As per claim 7, Hanson teaches an Internet document service (see abstract), comprising: document editing in an Internet client browser window; transmitting text collected in the step of document editing to an Internet host in a text file; automatically typesetting a source input text from said text file according to style sheets to produce an output file; transmitting from said Internet host said output file back to the client in a message; receiving at said Internet client browser window said output file as a fully typeset (see col. 10 line 21 to col. 12 line 53). However, Hanson fails to teach a PDF format. Hanson system is HTML-formatted. It would have been obvious to one ordinary skill in the art to incorporate a PDF-formatted document in Hanson because of its versatility and reliability in exchanging and distributing documents.

As per claims 8-14, Hanson teaches all the limitations regarding the typesetting (see fig 3-7; col. 10 line 21 to col. 12 line 53).

Claims 1-6 are allowed over the prior art of record.

The prior art of record fails to teach an HTML text file received by an internet host from a client-browser editor that is converted into an XML text file which is transformed to Latex source engine of the latex source to generate an output file which is transmitted in portable document format (PDF) to editor for printing.
